

▶ ZiPLink iPod Control

Bring the iPod to every room in your house!

With the Zemma Technologies iPod Control Interface, you can not only listen to your iPod from any room but control it also!. For the first time, full two way communication with the iPod allows users to browse their files and playlists and play them on demand.

Other events can even be triggered by connecting or disconnecting the iPod from your system, so that the iPod's audio can be turned on or off without pressing a single button.

The ZiPLink iPod control device simply plugs into the bottom of your iPod, and audio is routed directly out of it via gold-plated RCA connectors.

▶ INTEGRATION

Available: Now !

Buy online at www.bcd.cx/shop
